## NUMBER 1

**B. Gustafson** 491 Preface

**A.P. Anioutine** and **A.G. Kyurkchan** 495 Application of wavelets technique to the integral equations of the method of auxiliary currents

**A.P. Anioutine, A.G. Kyurkchan** and **S.A. Minaev** 509 About a universal modification to the method of discrete sources and its application

**J.-C. Auger, R.G. Barrera** and **B. Stout** 521 Scattering efficiency of clusters composed by aggregated spheres

**J.-C. Auger** and **B. Stout** 533 A recursive centered $T$-matrix algorithm to solve the multiple scattering equation: numerical validation

**A.J. Baran, S. Havemann, P.N. Francis** and **P.D. Watts** 549 A consistent set of single-scattering properties for cirrus cloud: tests using radiance measurements from a dual-viewing multi-wavelength satellite-based instrument

**R. Botet** and **P. Rannou** 569 Optical anisotropy of an ensemble of aligned fractal aggregates

**K. Chamaillard, S.G. Jennings, C. Kleefeld, D. Ceburnis** and **Y.J. Yoon** 577 Light backscattering and scattering by nonspherical sea-salt aerosols

**V.G. Farafonov, V.B. Il'in** and **M.S. Prokopjeva** 599 Light scattering by multilayered nonspherical particles: a set of methods

**A. García-Valenzuela** and **R.G. Barrera** 627 Electromagnetic response of a random half-space of Mie scatterers within the effective-field approximation and the determination of the effective optical coefficients

**I. Gurwich, M. Kleiman, N. Shiloah** and **D. Oaknin** 649 Scattering by an arbitrary multi-layered spheroid: theory and numerical results

**E. Hadamcik** and **A.C. Levasseur-Regourd** 661 Imaging polarimetry of cometary dust: different comets and phase angles

**E. Hadamcik, J.B. Renard, A.C. Levasseur-Regourd** and **J.C. Worms** 679 Laboratory light scattering measurements on "natural" particles with the PROGRA$^2$ experiment: an overview

**M.S. Hanner** 695 The scattering properties of cometary dust

**S. Havemann, A.J. Baran** and **J.M. Edwards** 707 Implementation of the $T$-matrix method on a massively parallel machine: a comparison of hexagonal ice cylinder single-scattering properties using the $T$-matrix and improved geometric optics methods

**E. Hesse** and **Z. Ulanowski** 721 Scattering from long prisms computed using ray tracing combined with diffraction on facets

**J.H. Hough** and **D.K. Aitken** 733 Polarimetry in the infrared: what can be learned?

**J.W. Hovenier, H. Volten, O. Muñoz, W.J. van der Zande** and **L.B.F.M. Waters** 741 Laboratory studies of scattering matrices for randomly oriented particles: potentials, problems, and perspectives

**Y.-X. Hu, P. Yang, B. Lin, G. Gibson** and **C. Hostetler** 757 Discriminating between spherical and non-spherical scatterers with lidar using circular polarization: a theoretical study

**C. Jäger, V.B. Il'in, T. Henning, H. Mutschke, D. Fabian, D.A. Semenov** and **N.V. Voshchinnikov** 765 A database of optical constants of cosmic dust analogs

**F.M. Kahnert** 775 Numerical methods in electromagnetic scattering theory

**B.N. Khlebtsov, L.A. Kovler, V.A. Bogatyrev, N.G. Khlebtsov** and **S.Yu. Shchyogolev** 825 Studies of phosphatidylcholine vesicles by spectroturbidimetric and dynamic light scattering methods

**C. Klusek, S. Manickavasagam** and **M.P. Mengüç** 839 Compendium of scattering matrix element profiles for soot agglomerates

**L. Kolokolova, L.M. Lara, R. Schulz, J.A. Stüwe** and **G.P. Tozzi** 861 Color of an ensemble of particles with a wide power-law size distribution: application to observations of Comet Hale–Bopp at 3 AU

**U.K. Krieger, C. Braun, L. Imbach, T. Koop, T. Corti** and **G. Videen** 873 An experimental examination of intensity fluctuations of a host droplet containing an inclusion

**A. Lazarian** 881 Magnetic fields via polarimetry: progress on grain alignment theory

**A.C. Levasseur-Regourd** and **E. Hadamcik** 903 Light scattering by irregular dust particles in the solar system: observations and interpretation by laboratory measurements

| | | |
|---|---|---|
| **L. Liu, M.I. Mishchenko, J.W. Hovenier, H. Volten** and **O. Muñoz** | 911 | Scattering matrix of quartz aerosols: comparison and synthesis of laboratory and Lorenz–Mie results |
| **P.W. Lucas** | 921 | Computation of light scattering in young stellar objects |
| **M. Min, J.W. Hovenier** and **A. de Koter** | 939 | Scattering and absorption cross sections for randomly oriented spheroids of arbitrary size |
| **M.I. Mishchenko, I.V. Geogdzhayev, L. Liu, J.A. Ogren, A.A. Lacis, W.B. Rossow, J.W. Hovenier, H. Volten** and **O. Muñoz** | 953 | Aerosol retrievals from AVHRR radiances: effects of particle nonsphericity and absorption and an updated long-term global climatology of aerosol properties |
| **P.C.G. de Moraes** and **L.G. Guimarães** | 973 | Uniform asymptotic formulae for the spheroidal radial function |
| **F. Moreno, S. Cotera, F. González, J.M. Saiz** and **G. Videen** | 983 | Multiple scattering by two-particle systems: statistics of the cross-polarized scattered intensity |
| **E.E. Narimanov** | 995 | Light scattering by asymmetric particles: the nonlinear dynamics perspective |
| **T.A. Nieminen, H. Rubinsztein-Dunlop** and **N.R. Heckenberg** | 1005 | Multipole expansion of strongly focussed laser beams |
| **T.A. Nieminen, H. Rubinsztein-Dunlop** and **N.R. Heckenberg** | 1019 | Calculation of the $T$-matrix: general considerations and application of the point-matching method |
| **T. Nousiainen** and **K. Vermeulen** | 1031 | Comparison of measured single-scattering matrix of feldspar particles with $T$-matrix simulations using spheroids |
| **A. Penttilä, K. Lumme, J.C. Worms, E. Hadamcik, J.B. Renard** and **A.C. Levasseur-Regourd** | 1043 | Theoretical analysis of the particle properties and polarization measurements made in microgravity |
| **S.K. Sharma** and **A.R. Jones** | 1051 | Absorption and scattering of electromagnetic radiation by a large absorbing sphere with highly absorbing spherical inclusions |
| **N.C. Skaropoulos** | 1061 | Backward and forward scattering of electromagnetic waves from partially aligned axially symmetric particles |
| **W. Sun, T. Nousiainen, K. Muinonen, Q. Fu, N.G. Loeb** and **G. Videen** | 1083 | Light scattering by Gaussian particles: a solution with finite-difference time-domain technique |
| **Z. Ulanowski, E. Hesse, P.H. Kaye, A.J. Baran** and **R. Chandrasekhar** | 1091 | Scattering of light from atmospheric ice analogues |
| **G. Videen** | 1103 | Polarization opposition effect and second-order ray-tracing: cloud of dipoles |

| | | |
|---|---|---|
| **K.W.T. Waldemarsson** and **B.Å.S. Gustafson** | 1111 | Interference effects in the light scattering by transparent plates |
| **Y.-I. Xu** and **N.G. Khlebtsov** | 1121 | Orientation-averaged radiative properties of an arbitrary configuration of scatterers |
| **P. Yang, Y.X. Hu, D.M. Winker, J. Zhao, C.A. Hostetler, L. Poole, B.A. Baum, M.I. Mishchenko** and **J. Reichardt** | 1139 | Enhanced lidar backscattering by quasi-horizontally oriented ice crystal plates in cirrus clouds |
| **P. Yang, B.A. Baum, A.J. Heymsfield, Y.X. Hu, H.-L. Huang, S.-C. Tsay** and **S. Ackerman** | 1159 | Single-scattering properties of droxtals |
| **P. Yang, H.-L. Wei, B.A. Baum, H.-L. Huang, A.J. Heymsfield, Y.X. Hu, B.-C. Gao** and **D.D. Turner** | 1171 | The spectral signature of mixed-phase clouds composed of non-spherical ice crystals and spherical liquid droplets in the terrestrial window region |
| **K. Ziegler** | 1189 | Localization of electromagnetic waves in random media |
